Experience

Kodefox.com
Software Engineer 2018-03-01 - Present

- Engineered web and mobile applications from client business requirements through to production deployment
- Implemented test-driven development (TDD) practices using unit tests and Cypress for end-to-end testing, ensuring high code quality and reliability
- Mentored and onboarded new engineers through Kodefox's internal bootcamp program, accelerating team ramp-up time

Core Technologies: Next.js · React.js · Node.js · TypeScript · Prisma ORM

Projects

Kodesk (Kodefox) 2023 - Present
HR management application streamlining employee operations, time tracking, and workforce scheduling for modern businesses.

Key Contributions:

- Refactored global state architecture from React Context to Jotai atomic state management, resolving prop drilling inefficiencies and reducing redundant component re-renders by 80% in load time.
- **Time Tracking System:** Developed end-to-end time tracker feature including backend API and frontend interface, enabling accurate tracking of employee work hours with real-time synchronization
- **Schedule Management:** Built google calendar like schedule grid component
- **Backend Development:** Implemented robust APIs for schedule management and time tracking
- **Code Quality Enhancement:** Reduced bundle size by 30% and improved page load times through code refactoring and efficient state management

https://kodesk.io

Akyrian (Kodefox) 2021

Clinical research application managing R&D workflows for healthcare professionals studying patient data through secure data entry and authorized review chains.

Key Contributions:

- **Database Architecture:** Designed scalable PostgreSQL database schema according to clinical requirements
- **Performance Optimization:** Reduced UI component load times by 65% through code splitting and lazy loading implementation
- **Grid Rendering Enhancement:** Optimized large data grid performance by eliminating unnecessary state updates, reducing render time from 3.2s to 0.8s (75% improvement) and improving hover responsiveness by 85%
- **Full-Stack Development:** Built responsive frontend interfaces and RESTful APIs, delivering 4+ core features including patient data management, review workflows, and audit log
- **Data Integrity:** Implemented robust validation systems ensuring 99.9% data accuracy across clinical research protocols

TVIP (Kodefox) 2019

Custom e-commerce solution for Aqua and Vit specialized in galon water delivery and premium beverage products, serving both B2B and B2C markets.

Key Contributions:

- **Database Design & Architecture:** Designed comprehensive database schema using Prisma ORM, supporting 2,000+ products, order management, and multi-vendor inventory tracking across 10+ distribution centers
- **Backend Development:** Built scalable Node.js backend infrastructure with 99.8% uptime and sub-200ms API response times
- **GraphQL Implementation:** Developed type-safe GraphQL API with 40+ queries and mutations, reducing data over-fetching by 60% and improving mobile app performance
- **Admin Dashboard:** Created responsive web dashboard for inventory management, order tracking, and analytics, reducing manual processing time by 70% for operations team
- **Technical Documentation:** Authored comprehensive API documentation and integration guides for mobile development team, accelerating mobile app development by 3 weeks
- **Order Processing:** Implemented automated order workflow system processing galon deliveries with real-time tracking and scheduling optimization

Comdash (Kodefox) 2018

dashboard providing real-time business intelligence and data visualization for Sampoerna's operational metrics and KPIs.

Key Contributions:

- **Data Visualization Widgets:** Developed 15+ interactive chart widgets including line charts, bar graphs, pie charts, and heat maps, displaying complex business metrics for 500+ daily active users
- **Responsive Design:** Created mobile-responsive dashboard components ensuring consistent user experience across desktop, tablet, and mobile devices with 95% cross-browser compatibility
- **Custom Chart Library:** Built reusable chart component library with 8+ chart types, reducing development time for new widgets by 40% and ensuring design consistency
- **Data Processing:** Implemented efficient data aggregation and filtering systems, handling 1M+ data points with sub-second query response times

Skills

JavaScript, TypeScript, Python
Programming Language

React, React Native, VueJS
Frontend Framework

Node, Express, GraphQL
Backend Framework

PostgreSQL, Prisma ORM
Database

Docker, Vim, AWS, Supabase, Vercel
Tools & Infrastructure

Languages

Bahasa Indonesia
Native

English
Fully Working Proficiency
